Senior Cloud Systems Administrator | Denver Broncos

Cover letter

Hi Broncos technology team,

Moving a workload is the easy part to put on a diagram. The harder part is making sure the people who support it know what changed, how to tell whether it worked, and what to do if it didn't. That's the part of your move toward cloud infrastructure that interests me.

At Front Range Internet, I ran NOC operations and handled engineering escalations for hosting and colocation clients. I used AWS alongside datacenter infrastructure and migrated workloads from Hyper-V and VMware ESXi into Docker and Kubernetes. At Technomancy IT, I've worked with AWS and Azure across client environments. For Excell Services in Wray, I modernized aging systems, set up Windows Server and Active Directory, and added VPN access for corporate users. That work was as much about keeping people productive through the change as it was about the infrastructure itself.

I'd bring a practical approach to the Broncos' hybrid environment: learn which workloads and support teams depend on each other, make changes with a recovery path, and leave behind checks and documentation the next person can actually use. I'm available to work onsite in Englewood.

Thanks,
Chad
